

Abstract

[0022] A method for proceeding with communications by a mobile device is provided. The method first determines if any registered public land mobile network has been stored in the mobile device. If yes, the method determines if the signals from the registered public land mobile network are clear enough to maintain a good communication quality. If yes, the method determines if the mobile device is one legitimate user of the registered public land mobile network. If yes, the mobile device starts to transmit signals via the registered public land mobile network.
